

N.B. The final electrical connection to this fitting must only be carried out by a competent electrician.

Safety: A Certified Secure platform / hoist should be used for front access retrofitting.

Warning – Disconnect power to existing fitting before installation.

<p>Step 1: remove the cover on the noggin where the Capella light is to be installed.</p> <p>Align the fitting with the noggin. Separate the longer part from the shorter case containing the driver, whilst not straining the joining cable.</p>	
<p>Step:2 Tilt the longer light fitting part and <u>carefully</u> drop it into the noggin, releasing one side then the other.</p> <p>Once inside, manoeuvre until fitting is lying flat on the glass bottom of the noggin.</p>	
<p>Step 3: Take the driver case part and tilt and drop into the noggin. Manoeuvre so it lies flat on the light fitting.</p>	
<p>Step 4: Pass the cable through the grommet hole into the adjoining cable runner for later connection.</p>
